EDUCATION

B.S. in Computer Science , Iowa State University	December 2026
- GPA 3.29 - Dean's Excellence Scholarship	

SKILLS

Programming Languages	Java, Python, TypeScript, Kotlin, JavaScript, C#, PHP, Dart, C, C++
Frameworks & Backend	Spring Boot, FastAPI, Node.js, Express
Frontend	Angular, WordPress, Flutter
Databases	MySQL, PostgreSQL, H2, SQLite
Tools	Git, REST APIs, JPA/Hibernate
Cloud & DevOps	AWS (EC2, S3, IAM), Docker
Relevant Coursework	Security and Privacy in Cloud Computing, Software Requirements Engineering, Software Testing

WORK EXPERIENCE

Part-time Full-Stack Web Developer Iowa State University - Office of Financial Aid	May 2024 — June 2025 <i>Ames, IA</i>
- Maintained and implemented new features for the internal administrative platform using React (frontend) and Laravel (backend) on MySQL. - Developed and maintained the university's expense estimator tool, used by more than 80%+ incoming students to forecast tuition and living costs.	
AI Engineer PARROT(Privacy-Aware AI Agent)	Jan 2026 — May 2026 <i>Ames, IA</i>
- Engineered a privacy-preserving hybrid AI pipeline integrating local data ingestion, embedding generation, Neo4j graph/vector retrieval, and remote LLM APIs for secure social media analysis. - Built an Agentic Retrieval-Augmented Generation (RAG) system using LangGraph, Neo4j vector indexes, semantic embeddings, and hybrid retrieval strategies to support conversational analytics over user social data. - Implemented privacy-by-design safeguards using data anonymization and structured API controls to prevent raw personal information exposure during remote LLM inference.	
Lead TA (Teaching Assistant) Iowa State University - Department of Computer Science	January 2024 — Present <i>Ames, IA</i>
Conducted structured office hours, offering targeted technical support and fostering a collaborative learning environment for undergraduate computer science students.	

PROJECTS

Financial Audit System (https://github.com/Haad1000/Finance-Control-Monitor-Java) Java, Spring Boot, JPA, REST APIs, H2 Database	December 2025 — February 2026
- Engineered a scalable compliance engine that processes financial transaction logs in near real-time, reducing manual compliance review effort by approximately 80-90% through automated transaction rule evaluation. - Implemented the Strategy Design Pattern to decouple business logic, allowing new compliance rules (e.g., Separation of Duties) to be added without modifying the core system. - Optimized database performance (Hibernate/JPA) by enforcing @OneToOne relationships and custom JPQL queries to eliminate redundant fetches (N+1 problem). - Built an idempotent scheduling system using Spring Scheduler (@Scheduled) to process thousands of events while preventing duplicate alerts via database constraints.	

LEADERSHIP

President , Web Development Club	August 2024 — current
Developed a mentorship program where experienced developers mentored newer members, improving their proficiency in front-end and back-end technologies.
